### REMARKS

Claims 1-20 are rejected under 35 U.S.C. §103(a) as being unpatentable over *Aguilar et al.* (U.S. 6,446,203) in view of *Basu* (U.S. 5,842,011).

Applicants traverse this rejection on the grounds that these references are defective in establishing a *prima facie* case of obviousness.

Claim 1 includes: "A system comprising:

a computer system including a processor and a memory, the computer system configured to:

include a preboot execution environment (PXE) specification wherein an initial boot order is set to PXE and subsequently to a hard disk;  
retrieve a preboot image from a first remote location; and  
execute the preboot image, the preboot image configured to cause the computer system to:  
detect a status indication associated with a previous boot attempt by the computer system; and  
in response to the status indication indicating a local boot attempt state:  
retrieve a first boot image from a second remote location;  
and  
boot the computer system using the first boot image."

As the PTO recognizes in MPEP §2142:

...The Examiner bears the initial burden of factually supporting any *prima facie* conclusion of obviousness. If the Examiner does not produce a *prima facie* case, the Applicant is under no obligation to submit evidence

of nonobviousness.....the Examiner must step backward in time and into the shoes worn by the hypothetical 'person of ordinary skill in the art' when the invention was unknown and just before it was made....The Examiner must put aside knowledge of the Applicant's disclosure, refrain from using hindsight, and consider the subject matter claimed 'as a whole.'"

Independent claim 1 of the present invention recites "including a preboot execution environment (PXE) specification wherein an initial boot order is set to PXE, and subsequently to a hard disk." The cited references fail to disclose the claimed invention. The remaining independent claims are modified from claim 1 but are submitted to also be allowable.

Therefore, there is simply no basis in the art for combining the references to support a 35 U.S.C. §103 rejection because neither of the cited references teach or even suggest the desirability of the combination. Moreover, neither of the cited references provide any incentive or motivation supporting the desirability of the combination. These references do not achieve a combined teaching or suggestion of an initial boot order is set to PXE and subsequently to a hard disk, as claimed.

The MPEP §2143.01 provides:

The mere fact that references can be combined or modified does not render the resultant combination obvious unless the prior art also suggests the desirability of the combination. *In re Mills*, 916 F.2d 680, 16 USPQ2d 1430 (Fed. Cir. 1990).

Therefore, the Examiner's combination arises solely from hindsight based on the invention without any showing of suggestion, incentive or motivation in either reference for the combination.

Thus, the Examiner's burden of factually supporting a *prima facie* case of obviousness has clearly not been met.

The Federal Circuit has, on many occasions, held that there was no basis for combining references to support a 35 U.S.C. §103 rejection. For example, in *In re Geiger*, the court stated in holding that the PTO "failed to establish a *prima facie* case of obviousness":

Obviousness cannot be established by combining the teachings of the prior art to produce the claimed invention, absent some teaching, suggestion or incentive supporting the combination. *ACS Hospital Systems, Inc. v. Monteffiore Hospital*, 732 F.2d 1572, 1577, 221 USPQ 929, 933 (Fed. Cir. 1984).

The Federal Circuit has also repeatedly warned against using the Applicant's disclosure as a blueprint to reconstruct the claimed invention out of isolated teachings in the prior art. See e.g., *Grain Processing Corp. v. American Maize-Products*, 840 F.2d 902, 907, 5 USPQ2d 1798, 1792 (Fed. Cir. 1989).

More recently, the Federal Circuit found motivation absent in *In re Rouffet*, 149 F.3d 1350, 47 USPQ2d 1453 (Fed. Cir. 1998). In this case, the court concluded that the board had "reversibly erred in determining that one of [ordinary] skill in the art would have been motivated to combine these references in a manner that rendered the claimed invention [to have been] obvious." The court noted that to "prevent the use of hindsight based on the invention to defeat patentability of the invention, this court requires the Examiner to show a motivation to combine the references that create the case of obviousness." The court further noted that there were three possible sources for such motivation, namely "(1) the nature of the problem to be solved; (2) the teachings of the prior art; and (3) the knowledge of persons of ordinary skill in the art." Here, according to the court, the board had relied simply upon "the high level of skill in

Customer No. 000027683

the art to provide the necessary motivation," without explaining what specific understanding or technological principle within the knowledge of one of ordinary skill in the art would have suggested the combination. Notably, the court wrote: "If such a rote invocation could suffice to supply a motivation to combine, the more sophisticated scientific fields would rarely, if ever, experience a patentable technical advance."

Therefore, independent claims 1, 9 and 14 and the claims dependent therefrom are submitted to be allowable.

In view of the above, it is respectfully submitted that claims 1-20 are in condition for allowance. Accordingly, an early Notice of Allowance is courteously solicited.

Respectfully submitted,
